Keychron Q9 – layers

macOS, input source Swedish – Pro. Small grey letter = printed keycap. Grey key = nothing new on that layer (works as normal).

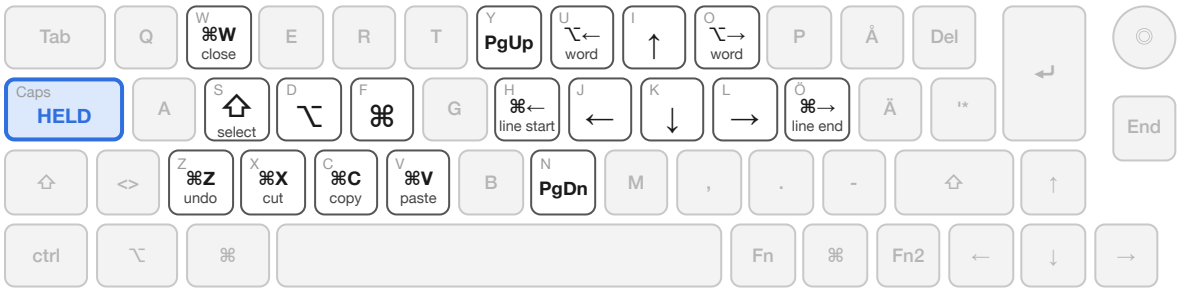

Base nothing held

Fn layer: numbers & symbols hold Fn — first key right of Space

Caps layer: arrows & navigation hold Caps Lock (tap = Esc)

Fn2 layer: media & lighting hold Fn2 — third key right of Space (Keychron default)

Good to know

- Shift works on top of Fn: Shift+Fn+1 = **!**, Shift+Fn+8 = **(**, Shift+Fn+Tab = ° (small labels top right).
- ~ is a dead key: Fn+Ä, then Space.
- Caps Lock: tap = **Esc** (fires on release), hold = navigation layer.
- Select text: hold Caps + S (⇧), then J/L. Add D (⌥) for whole words, F (⌘) to the end of the line.
- Knob: turn = volume, press = mute. With Fn2 held: turn = key lighting brightness, press = lighting on/off.
- Change or restore: `~/Development/keychron-q9/q9_keymap.py` (backup-2026-10-06.json).
